

CareTracker is The Easiest Paperless System Says Gateway Senior Living

Gateway Senior Living in Lincoln, Nebraska, offers a full continuum of care ranging from independent living to skilled nursing. The organization implemented CareTracker by Resource Systems in February of 2009 to improve the quality of care for the residents in their long-term care facility.

"CareTracker is the easiest, most user-friendly paperless system I have ever encountered in my 21 years as a health care administrator," said Amy Fish, building administrator. "We didn't have to change to fit CareTracker. It adapted to us, which is something that other software vendors could learn from!"

She was also impressed with how quickly her employees were able to learn and use the system. "I was shocked at how quickly everyone picked it up," she said. "Even the ones that proclaimed they weren't computer savvy and crossed their arms in initial protest couldn't find anything to complain about. It's that easy."

Prior to CareTracker, Gateway Senior Living staff documented on paper forms that presented challenges that have become common to the industry. "Paper clogged our filing cabinets," said Amy. "There was little to no way of tracking or trending or noting patterns without hours and hours of labor."

While Gateway Senior Living has always taken pride in the quality of care they provide, staff members can now track data and find patterns much more quickly and efficiently

with CareTracker's Clinical Intelligence tools and reports. Amy thinks they are much better equipped now and can care for residents to the maximum of their potential.

Since its implementation, CareTracker has helped improve the accuracy of data collected by staff, as well as foster an increase in the efficiency and productivity of the entire facility on a day-to-day basis.

"We're able to more easily monitor weight issues and react more quickly," said Amy. "The MDS Coordinator no longer has to hunt for data, and it pulls over directly into our clinical system so it's less time for her to complete the MDS."
